

PUBLIC TEST SERVER

PROJECT ORION

Explore. Fight. Loot.

A field guide to Lithium, the Interstellar Anomaly Scanner, public anomaly missions, reward delivery, and the cost of scaling IAS to level 60.

NEW RESOURCE

LITHIUM STORAGE

Unlimited

Not tradeable or lootable

MISSION CATALOG

ADVERTISED

25+ types

PvE, PvP and ACS

PVP PREMIUM

REWARD MULTIPLIER

2x

Fleet can be attacked

WHAT CHANGES

- Convert Metal, Crystal, Deuterium, or Lifeform Food into Lithium.
- Use Lithium to scan anomalies and claim completed mission rewards.
- Fight random NPC waves or run peaceful cargo objectives.
- Coordinate alliance fleets through ACS, while public objectives create PvP risk.

STATUS **Mechanics and balancing remain subject to PTS changes.**

LITHIUM ECONOMY

The resource that powers anomaly scanning and reward claims

CONFIRMED PROPERTIES

- Unlimited storage; cannot be traded or stolen.
- Produced by converting M/C/D or Lifeform Food.
- Conversion stops when the selected source runs out.
- Spent on scans and reward claims.

IAS ROLE

- Raises Lithium conversion throughput.
- Unlocks higher anomaly levels.
- Scales enemy size, composition, and loot.
- Uses one planet field; sub-buildings use none.

LITHIUM PRODUCTION MODEL

$$\text{Lithium/hour} = \text{floor}(200 \times L \times 1.1^L)$$

IAS 1	IAS 5	IAS 10	IAS 15
220/h	1,610/h	5,187/h	12,531/h

CONSTRUCTION MODEL

$$\text{Cost} = \text{floor}(\text{Base Cost} \times 1.4^{(\text{Level} - 1)})$$

Base cost: 84 Metal / 42 Crystal / 14 Deuterium (6:3:1)

LEVEL 59 -> 60

Metal	35,142,559,683
Crystal	17,571,279,841
Deuterium	5,857,093,280
TOTAL	58,570,932,804

CUMULATIVE IAS 0 -> 60

Metal	122,998,958,649
Crystal	61,499,479,308
Deuterium	20,499,826,416
TOTAL	204,998,264,373

ANOMALY OPERATIONS

Public objectives combine randomized NPC encounters with player interference

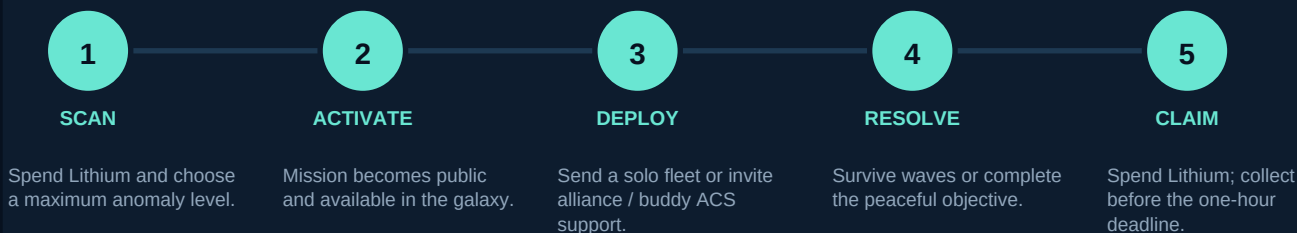

CONFIRMED CATEGORIES

- NPC wave defense
- Pirate fleet combat
- Hostile-defense combat
- Death Star encounters
- Peaceful delivery / transport
- PvE and PvP-enabled variants
- Cooperative ACS operations

PUBLIC OBJECTIVE RISK

- Activated missions become visible to the galaxy.
- Other players can take or interfere with objectives.
- PvP mission fleets can be attacked and recycled.
- PvP-enabled missions pay double rewards.
- Higher anomalies cost more Lithium to scan and claim.

MISSION LIFECYCLE

ALLIANCE COOPERATION

ACS PARTICIPATION

Alliance members and buddies can join an operation. Rewards are divided according to the resource value of each player's contributed fleet.

CURRENT LIMITATION

Cooperative Orion missions are currently unavailable in universes where ACS is disabled.

REWARDS & SCALING

Confirmed behavior, delivery exposure, and the remaining data gaps

KNOWN REWARD POOL

- Resources and ships
- Dark Matter
- Lifeform experience
- Artifacts (normal 3,600 cap)
- Exclusive premium items

CLAIM AND DELIVERY

- Claim after each wave or at mission end.
- Claim cost is split between waves.
- Partial claim is possible with insufficient Lithium.
- Rewards expire one hour after the final wave.
- Delivery is visible to Sensor Phalanx.

CONFIRMED SCALING STACK

Base reward x anomaly/IAS scaling x PvP (2x) x General/Mecha bonus

IAS/anomaly level scales enemy composition, enemy size, and loot. The General class adds an Orion reward bonus, which Mecha General Improvement can increase. ACS divides the resulting reward; it is not documented as a multiplier.

NOT YET PUBLISHED

- Complete names and rules for all 25+ mission templates
- Resource-to-Lithium conversion ratios
- Scan and reward-claim costs by anomaly level
- Base reward formula, random ranges, and caps
- General class and Mecha bonus percentages
- Whether economy speed, score, fleet value, or universe age affects rewards
